

AI Receptionist - Assignment 6 Final Submission

CI/CD and ML Ops Pipelines | INFO8665 | Final one-page PDF for D2L dropbox

Team members: Haibo Yuan; Preeja Anilal; Anthony Nosa Izevbokun; Minh Thuan Truong

Prepared: Aug 12, 2026

Instructor / UAT reviewer: Anasuya Bhima

Artifact	Final evidence / link
Project	AI Receptionist - dockerized Streamlit + FastAPI app with ML pipeline services.
Local run	Verified on local machine: Streamlit http://localhost:8501, API http://localhost:8000, frontend http://localhost:3000.
Container test	docker compose exec -T api python -m pytest -q -> 59 passed, 3 warnings.
Docker Hub	https://hub.docker.com/r/preeja73/ai-receptionist
GitHub repo	https://github.com/Panila17960870/info8665-ai-receptionist
GitHub PR	https://github.com/Panila17960870/info8665-ai-receptionist/pull/19 - Assignment 6 merge evidence.
Azure DevOps	https://dev.azure.com/Panila17960870/AI-Receptionist/_workitems/recentlyupdated/
Related work items	#88 A6 active; #95 PR/PDF task; #89 UAT created for instructor review; Sprint 6 board updated.
Service scope	ML Ops pipelines and SOA contracts cover sentiment, intent, scheduling, FAQ, escalation, and voice/chat workflows.

Local Docker Run Evidence

The full application runs locally from Docker Compose. API health and authenticated chat endpoint were verified, and Streamlit loaded for user workflow testing.

ML Ops / Service Contract Evidence

ML pipeline stages are exposed as service-backed workflows and documented in the SOA contract package. Evidence below shows the ML pipeline work items and implementation artifacts.

Covered ML use cases: sentiment, intent, scheduling, FAQ, escalation, voice/chat. Contracts: request/response parameters, service ownership, API boundaries.

Cloud / DevOps Evidence

Docker image was published to Docker Hub and Azure DevOps work items track Sprint 6 completion, UAT, PR, and submission evidence.

Instructor pull/run note

Pull latest branch, then run: docker compose up --build. Local ports: 3000 frontend, 8000 FastAPI docs/API, 8501 Streamlit UI. Containerized test command verified: python -m pytest -q.

Final PDF includes project name, team members, local screenshots, Docker Hub URL, DevOps link, GitHub repo/PR, related tasks/bugs/artifacts.
